Gemini API Familiarity

ComicCraft – AI Comic Story Creator using Gemini Models

Overview

ComicCraft uses Google Gemini models for the storytelling part of comic generation.

Gemini Flash

Gemini Flash is selected for fast and structured generation of a five-panel comic outline from the user's story prompt.

Gemini Pro

Gemini Pro is selected for detailed comic narration and engaging character dialogues based on the generated outline.

Integration flow

The backend calls the Gemini-powered functions dynamically during comic generation. The responses are cleaned and passed to the layout and frontend stages.

Project result

Using the Gemini models allows the application to turn a simple prompt into a structured outline, narration, and dialogue.
