Python Programming Proficiency

ComicCraft – AI Comic Story Creator using Gemini Models

Role

Python is the main programming language for the ComicCraft backend and AI workflow.

Core functions

generate_outline() creates panel outlines; generate_story() expands them into narration and dialogue; generate_image() creates and saves images; build_comic_layout() organizes panels; save_pdf() exports the comic.

Data structures

The outline is represented as a list of dictionaries, with panel number, title, scene description, and image-generation prompt.

Error handling

Route handlers use FastAPI HTTPException and try-except blocks to handle unexpected failures such as API errors or JSON decoding problems.

Project structure

The project separates responsibilities into modules such as gemini_flash.py, gemini_pro.py, image_generator.py, layout_builder.py, exporters.py, and routes.py.
