ComicCraft End-to-End Workflow

ComicCraft – AI Comic Story Creator using Gemini Models

Step 1: Input

The user enters a story prompt, character name, setting, tone, and art style through the homepage.

Step 2: Outline

Gemini Flash creates a structured five-panel outline.

Step 3: Story

Gemini Pro expands the outline into narration and character dialogue.

Step 4: Images

Stable Diffusion generates comic-style illustrations from image prompts.

Step 5: Layout

build_comic_layout() matches each generated image with its corresponding panel story.

Step 6: Export

save_pdf() uses FPDF to place images and narration on separate pages and saves the final PDF.

Step 7: Preview and success

The generated comic is displayed through Jinja2 templates, and the user can download it as a PDF and receive an export-success confirmation.

Source basis: uploaded ComicCraft project document.
